

Hi, I'm Hanna Oktaviana Putri

A Student

I enjoy solving problems, designing,
and operating data to create effective and efficient solutions.

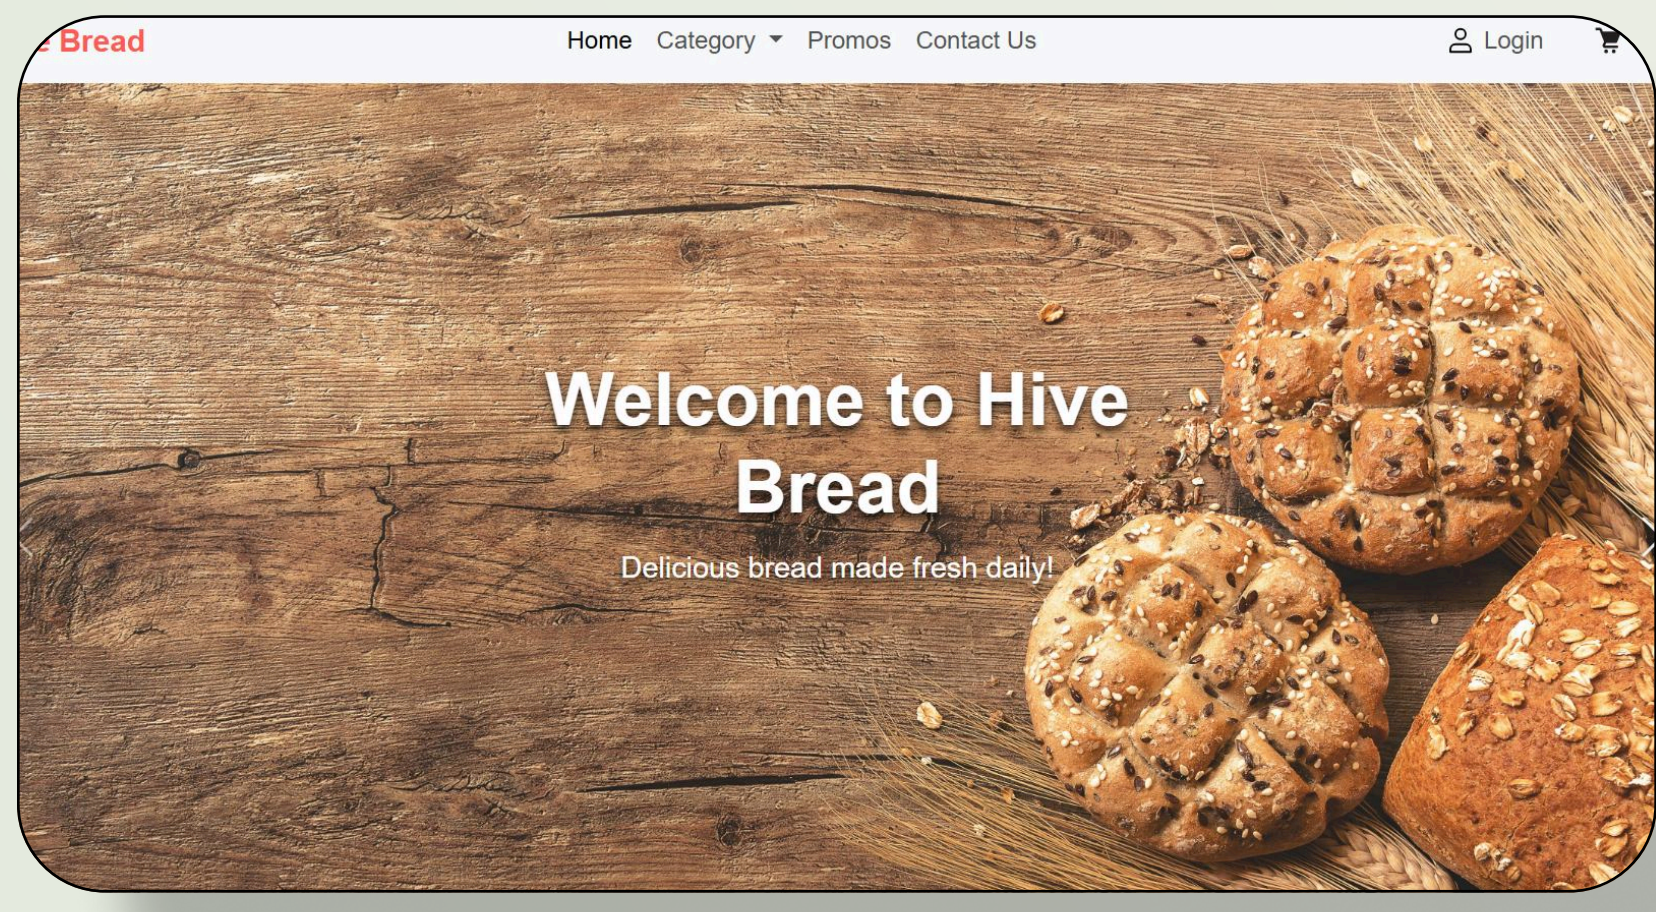

[My Project](#)

I'm a student majoring in Informatics Engineering at Gunadarma University

Although I didn't participate much in campus organizations, I focused on personal and collaborative projects. Together with friends, we developed projects such as designing web UI/UX, building websites using the Laravel framework, and managing attendance databases. These experiences have allowed me to enhance my technical skills while fostering teamwork and creativity.

I believe these projects have shaped my ability to approach challenges with a solution-oriented mindset.

Projects

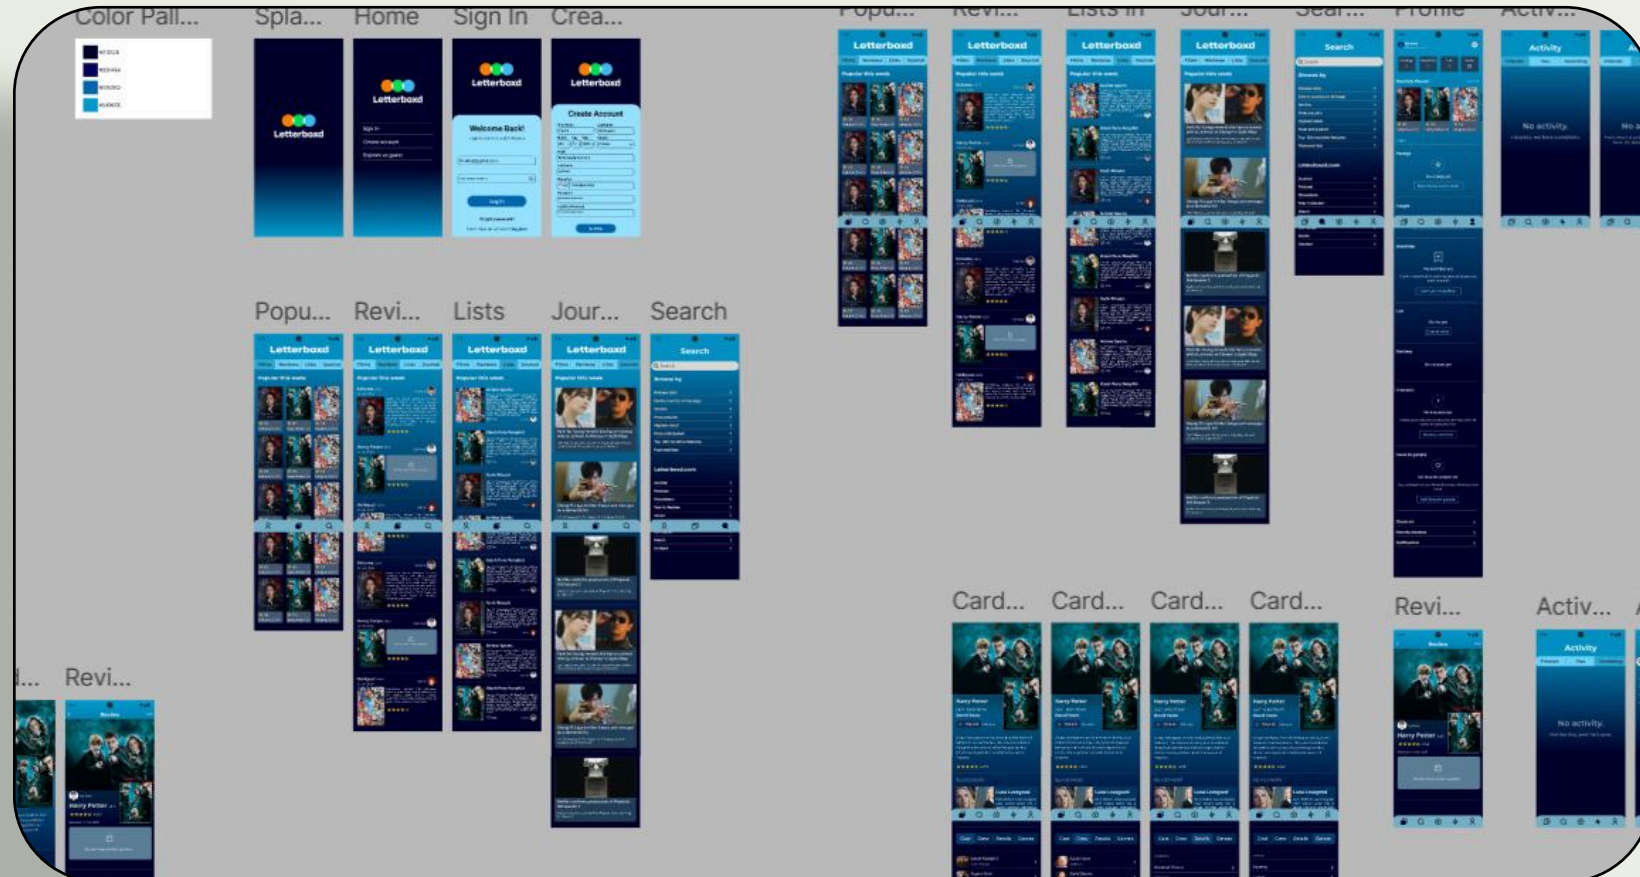

Bakery Website

The bakery website is a project I developed using the Laravel framework, where I integrated a MySQL database and built the system using PHP. Through this project, I gained valuable experience in backend development, database management, and optimizing website functionality.

Redesign Letterboxd

In this project, I redesigned the Letterboxd application using Figma. I modified the navigation and user interface to improve usability and changed the application's color scheme for a better visual experience.
